Be more productive: unlimited hosts, unlimited possibilities.

MAMP PRO

With MAMP PRO you can create a separate host for each of your web projects. Install WordPress with only one click and after completion of your page, publish it directly from MAMP PRO on your live server. [Learn more](#)

PHP

[phpinfo](#) shows the current configuration of PHP.

PHP-Caches

APC (not loaded)
Accelerator (not loaded)
XCache (not loaded)
OPcache (not loaded)

phpMyAdmin

Configure your MySQL databases with [phpMyAdmin](#).

phpLiteAdmin

phpLiteAdmin needs PHP 5.2.4 to 7.0.x

Save your hosts' data and database to Dropbox.

MAMP Cloud

You can easily save your host and database data in the cloud and later retrieve it on another Mac, when backing up data before making changes on your host. [Learn more](#)

MySQL

MySQL can be administered with [phpMyAdmin](#).

To connect to the MySQL server from your own scripts use the following connection parameters:

Hostlocalhost

Port3306

Userroot

Passwordroot

Examples:

PHP >= 5.6.x

PHP <= 5.5.x

Python

Perl

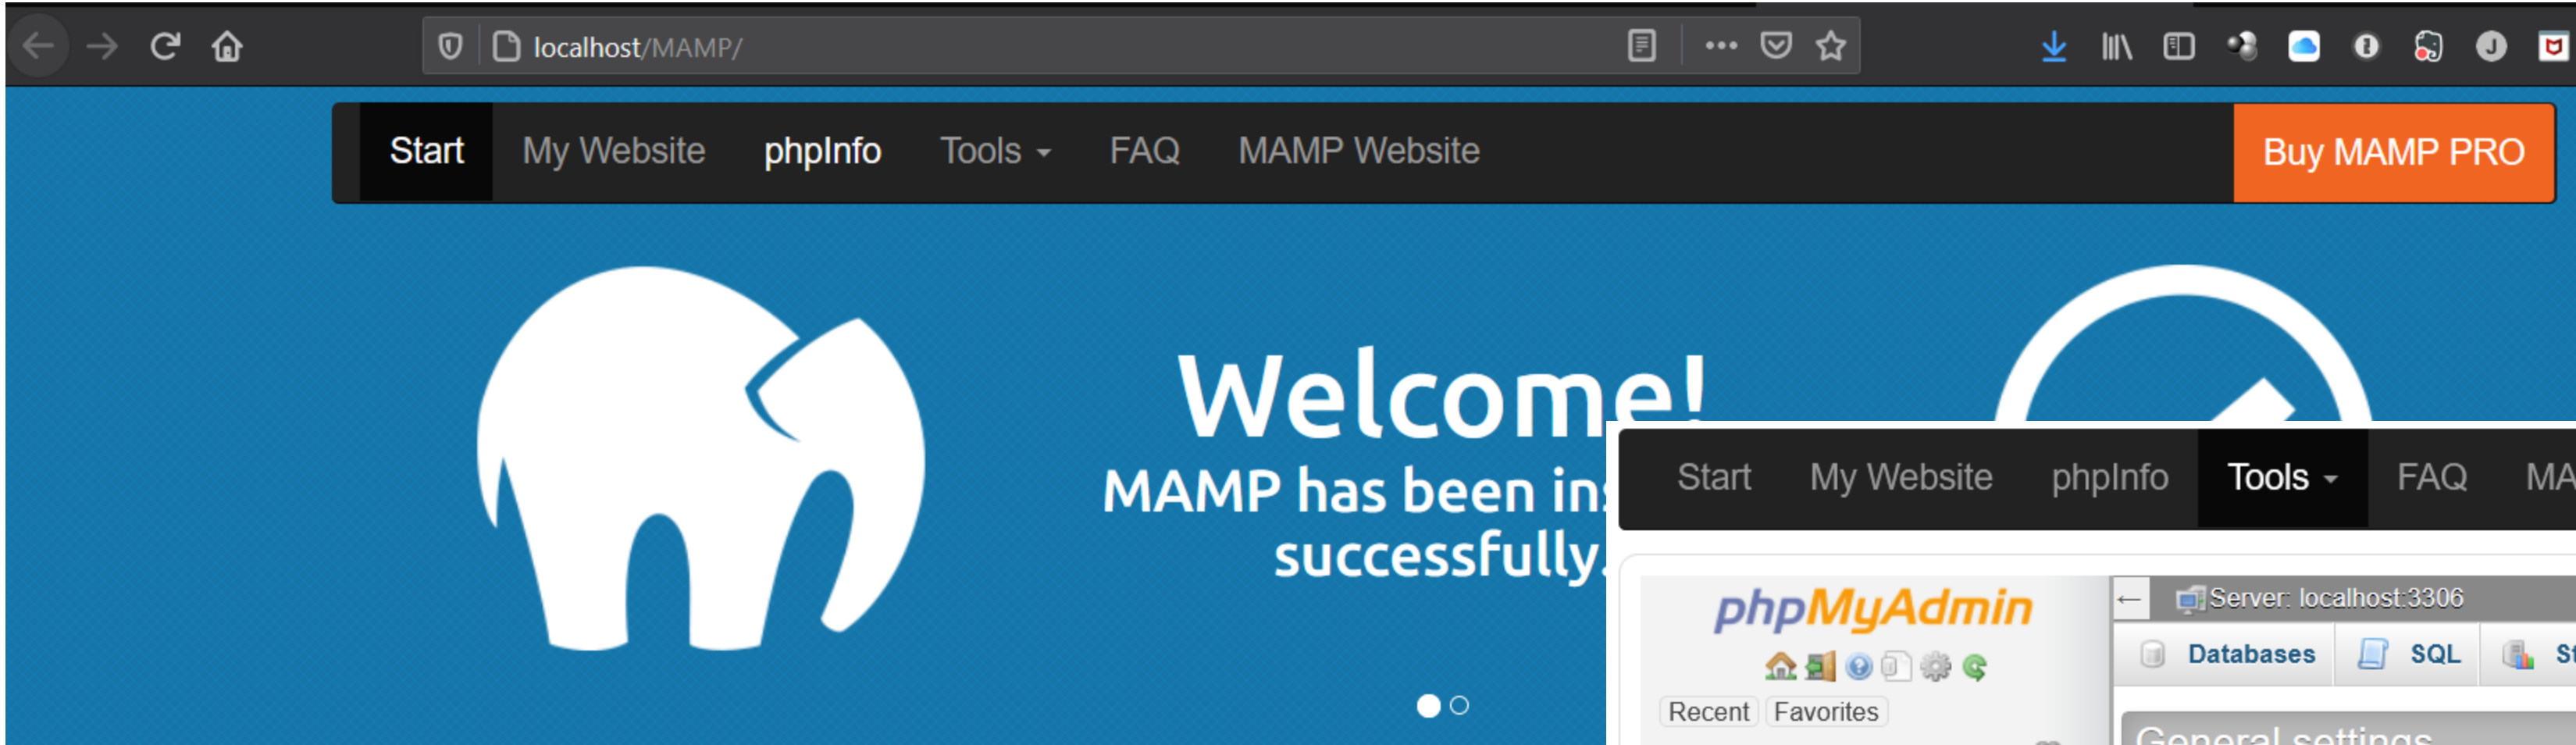

Connect via network:

\$user = 'root';

\$password = 'root';

The screenshot shows the phpMyAdmin web interface. The 'General settings' tab is selected, showing the 'Server connection collation' set to 'utf8mb4_unicode_ci'. The 'Appearance settings' tab is also visible, showing the 'Language' set to 'English' and the 'Theme' set to 'pmahomme'. A red arrow points from the 'phpMyAdmin' link in the MAMP Cloud section of the previous image to this screenshot.
